

WHITE STAR

Service Recommendations

Dear Valued Customer,

Thanks for making the investment in your Bobcat purchase. To insure a long, profitable life for your machine, please be aware of the following tips:

1. Your Air Filters are crucial to the long life of your machine. Their condition needs to be checked frequently – each 20 to 25 hours- even more often if you are working in a dusty environment. When you service your machine at the regular service intervals (50, 250, 500 and 1,000 hours), the filters should be checked at the very least – and changed if necessary. When installing new filters, please be sure to position them correctly so that they will effectively seal out any chance of dirt getting around them. The filters should easily fit into position without forcing them. If they don't fit properly, it is possible that the filters aren't in the correct position.
2. Your Drive Belt withstands a lot of torque, especially in the first 10 hours of usage. The Operator's Manual that came with your machine contains the proper procedure for making this critical drive belt adjustment. The drive belt should be checked at the critical 50 hour service interval, and each time your machine is serviced. If the belt isn't adjusted properly, it can break suddenly (and cause the machine to stop operating). Please ask your Bobcat dealer to perform a drive belt adjustment each time he services your machine.
3. Your Fuel Separator Filter is designed to collect any water that naturally occurs in diesel fuel. It is critical that the filter be drained regularly by opening the petcock at the bottom of the filter. If water enters your engine, it will result in poor performance, an engine that won't start and run, and a possible service call. As a rule, the fuel separator filter should be checked daily and drained if necessary.

Your Bobcat machine is designed to provide many years of productive, reliable service. By following the procedures above, you will help make those years of productivity a reality. Thanks again for choosing Bobcat for all your compact equipment needs.
